- Participated in 2 large scale public relations events of which attributed to spreading recognition of the organization evident by an increase of social media engagement by 10%
- Verbally marketed organization events/interests to approximately 1000 students.

Boosters Club

Learning Leader

Elmhurst, NY

June 2014 - September 2014

- Created accelerated curriculum for children ages 7-12 that allowed the children who were struggling to catch up to their peers.
- Provided care and supervision totaling 2 hours a day that attributed to a reduction in behavior problems present in certain children.
- Spent 20% of the working day in one on one sessions with children to develop effective instructions tailored for the individual child.

SKILLS

Programming Languages/Tools: Python, Java, C++, C, JavaScript, HTML, Unix, SQL, Git, CSS

PROJECTS

Restaurant POS System *Java*

A personal project that is currently in progress that seeks to create a program that restaurant owners can use to manage thier point-of-sales efficiently with simple UI. The finished product will incorporate web/server connection, app/mobile compatibility, integrated with a receipt printer, and data storage for analytics.

Astronomy Project *Python, SQL*

A course project that is currently in progress that involves making an SQL query to single out a portion of the sky given specific right ascension and declination. This query provides a listing of all celestial objects in that portion of the sky. Then, provided with a smaller sample size of the collected region by the user, the region can be inverted,flipped, transformed in anyway. The algorithm will find the celestial bodies in the overarching region that correspond to the transformed regions.

UB Course Survey Tool *PHP, MySQL, phpMyAdmin, Apache HTTP Server*

A website created for a course project with the goal of teaching students Agile software development. This website goal was to provide professors a way to manage students who are working in groups. In the groups, they are able to provide scores on each individual members of the group. The professor is able to manage their courses, students, student groups, and scores given by students. Professors are able to download student scores into a CSV file for ease of storage and data aggregation.
